

Web Application Developer (Entry Level)

LaGwana is seeking a motivated Web Application Developer to work alongside our lead developer in designing, building, and maintaining our custom business applications. This position offers the opportunity to work across the entire software stack while gaining hands-on experience with real-world software used every day to support LaGwana's business operations and customer services.

Responsibilities

- Develop and maintain single-page web applications
- Build responsive user interfaces using HTML, CSS, and JavaScript
- Develop backend APIs and business logic
- Work with relational databases
- Troubleshoot and resolve software issues
- Test, debug, and improve existing applications
- Work closely with our lead developer to design, develop, and enhance new and existing applications.
- Continuously learn new technologies and development practices

Desired Qualities

Self-motivated learner	Able to work independently and as part of a team
Strong analytical and problem-solving skills	Excellent communication skills
Detail-oriented	Passion for software development

Helpful Experience (Not Required)

Experience with any of the following technologies is a plus. We are willing to train the right candidate.

HTML	Vue.js (Options API)	PHP	Git
CSS	Bootstrap 5	MySQL	Tauri
JavaScript	Laravel	Linux	

Compensation and Benefits

- \$50,000-\$65,000 annually based on experience and qualifications
- Paid vacation and holidays; Retirement plan
- Opportunities for professional growth and skill development

Ideal Candidate

At LaGwana, we have built custom software that helps us operate more efficiently. Rather than focusing on a single product, you'll have the opportunity to work on a variety of applications that solve real business challenges. Every project offers new opportunities to learn, contribute, and make a lasting impact. Whether you've completed a degree, attended a coding bootcamp, or built projects on your own, we'd like to hear from you if you're excited about software development and eager to grow your skills.

This is an excellent opportunity for someone who wants to grow from an entry-level developer into a senior technical role. We are looking for someone interested in building a long-term career with LaGwana.

Please include a résumé and, if available, links to any personal projects, GitHub repositories, websites, or applications you've built. Professional experience is not required—we're interested in seeing how you approach software development.
